REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Among the closest prior art, Henley et al. (US 4,239,565), Rudder et al. (US 3,945,866) and Yabe (US 3,909,337) each suggest formation of a first stage/step carcass which is removed from the first stage/step machine and shaped on a second stage/step machine using a bladder, the tire then being placed/assembled in the vulcanizing mold while still installed on the bladder used to shape the tire carcass. These patents do not however teach or render obvious removing the first green tire from the first step/stage molding machine followed by installation of a vulcanizer bladder unit which is inflated, the first green tire being placed *once again* on the first step/stage molding machine while the vulcanizer bladder unit is *still installed*, and application of the belts and tread to form the completed green tire and placement into a mold while the vulcanizer bladder unit is still installed on the completed green tire as claimed. Leblond et al. (US 3,873,397) is exemplary of the known formation of a tire in a single stage/step process in which the green tire is built and shaped at a single stage/machine. The tire is not however removed for installation of a vulcanizer bladder and placed once again on the machine followed by molding with the tire on this same bladder. Snyder (US 1,732,778) is exemplary of the known installation of a vulcanizer bladder to a green tire but likewise fails to teach or render obvious a method as claimed. None of the closest prior art, then, would teach or render obvious a method as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
